

Course Exercise - Reference Files

Python for Data Analysis

Duration: 10 weeks - Instructor: Ahmed Mansour

Your exercise for this week

1. Load the provided CSV into a pandas DataFrame.
2. Find and handle the missing values in two columns.
3. Group the data by category and compute the mean per group.
4. Plot one bar chart that answers a question about the data.
5. Export your cleaned DataFrame to a new CSV file.

Complete the steps in order - each one builds on the previous. Bring your questions to the next session.
