

Course Exercise - Reference Files

React in Practice: Components & Data Binding

Duration: 8 weeks - Instructor: Omar El-Sayed

Your exercise for this week

1. Set up a new Vite + React project on your machine.
2. Build a Card component that accepts title and children props.
3. Lift shared state out of two sibling components.
4. Render a list from an array with a stable key for each item.
5. Push your exercise repo and share the link in the next session.

Complete the steps in order - each one builds on the previous. Bring your questions to the next session.
